

Cuiaba EPE

Quick Facts	
■ Country of Operation:	Brazil
■ Business Segment:	Power Generation
■ Asset Details:	480 MW Gas-Fired Combined-Cycle Power Plant
■ Operating Since:	1999
■ AEI Ownership:	100%

The Cuiaba Integrated Project consists of four companies (GOM, GOB, TBS, EPE) that on an integrated basis operate a power plant in Brazil, purchase natural gas in Bolivia and transport it through pipelines to Brazil for use as a fuel in the generation of electrical energy at the Cuiaba - EPE power plant. See fact sheet for [Cuiaba-GOM/GOB/TBS](#) for a description of the pipelines.

Our subsidiary EPE is a power generation company that operates a dual fuel (natural gas/diesel), combined-cycle power plant located in Cuiaba, Mato Grosso, Brazil. EPE's in-service date was April 1999 and it began commercial operations in May 2002. EPE generally has not operated since August 2007 due to lack of gas supply.
